Allowable Subject Matter

2. Claims 1-6 are allowed.
3. The following is an examiner's statement of reasons for allowance: Prior art fails to teach or fairly suggest a shutter for a digital still camera, in combination with the other elements claimed, comprising:
 - a. A forcing device configured to directly or indirectly prevent rotation of the rotor, when energization of the coil is interrupted at an exposure aperture regulating position of the rotor where the rotor has been rotated from the midpoint angular position by a predetermined angle within an angular range that is narrower than the predetermined rotational angular range, by exerting an urging force against the attractive force, so as to maintain a small-diameter aperture regulating state formed by the two shutter blades (claim 1).
 - b. A forcing device configured to directly or indirectly prevent rotation of the rotor in cooperation with the attractive force, when energization of the coil is interrupted at an exposure aperture regulating position of the rotor where the rotor has been rotated beyond the midpoint angular position by a predetermined angle, so as to maintain a small-diameter aperture regulating state formed by the two shutter blades, wherein the forcing device is a torsion spring wound around

the shaft outside a blade chamber, and wherein the small-diameter aperture regulating state, which is caused by the two shutter blades, is maintained in a state in which both end portions of the torsion spring are positioned respectively on an operating locus of each of the two shutter blades in the blade chamber and are engaged with at least one of two base plates of the blade chamber (claim 5).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
